

Join the 1000's of Victorian households that have replaced their incandescent light bulbs with low energy compact fluorescent lights (CFL's) and reduced their lighting costs by 80%.

Inefficient incandescent light bulbs will soon cease to be available in the shops as their phasing out becomes [mandatory](#) in November 2009.

There are many resources available to make this change quick, cheap and easy:

- You can take advantage of a [free energy saving light bulb installation](#) through the Live Green with LESS (LGWL) program by ringing 1300 855 362, which is a convenient and quick way to get started.
- There is a complete range of energy saving light bulbs available in lighting stores to retain [lighting ambience](#). Types vary from warm to cool white bulbs, downlights to suit 240V fittings, candle-effect lightbulbs for chandeliers, floodlights, dimmable globes and bayonet and Edison screw fittings.
- You can get the closest match by taking your old incandescent light bulb to your nearest lighting store with the [ResourceSmart retail program](#), who are trained to advise on energy saving lighting.
- Currently, the best option for downlights is to replace regular 50W downlights with the more efficient 35W or 20W infrared coated downlights. You won't need an electrician and your lighting quality won't be affected.
- New bulbs provided through the LGWL installation program last 15,000 hours but responsible [disposal](#) of the new light bulbs is important. Even though less mercury overall goes into the atmosphere as a result of these new bulbs, recycling can be

arranged your local council – [Boroondara](#) – [Casey](#) – [Knox](#).

Congratulations on starting to think about more energy efficient measures. You can always contact the Help Desk on 1300 174 101 or visit the [forum](#) if you have further queries.
